

## Considerations for Higher Education ERP in The Cloud

March 30<sup>th</sup>, 2016 | 1-5pm  
Courtyard by Marriott Portland City Center  
Portland, Oregon

Unique in the current market, Workday was launched without legacy software dependencies and with a singular focus on delivering a *purely cloud-based* alternative to traditional enterprise resource planning (ERP) solutions. Presentations will cover the historical context behind our technology decisions, an overview of the functionality available today, and an update on our higher education roadmap.

### Today's Presenters

**Introduction to Workday:** Mike Duffield, GM Education & Government

*Mike Duffield is Workday's 6<sup>th</sup> employee and the son of one of our founders. Mike will provide a historical perspective on how our approach to "cloud" is unique and how these choices drive our ongoing strategy. Like his father, Dave Duffield, Mike has a passion for supporting Higher Education. Mike will share his perspective on how technology choices that were made over a decade ago have enabled us to continuously innovate and are supporting new initiatives like Workday@College.*

**Workday Student:** Kevin Molloy, Director, Higher Education Strategy

*The technology expectations of today's students change rapidly. In this session, Kevin will take us through the roadmap for Workday Student and Financial Aid, with particular emphasis on how Workday's architecture for the cloud enables us to keep up with unforeseen changes in the technology landscape. The content will include an overview of recently delivered solutions, our deployment strategy and timeline for remaining modules, and how we are partnering with members of the higher education community to develop the first completely new SIS of the current century.*

**Workday Technology:** Steven Forman, Enterprise Architect

*The technical session will provide a detailed overview of the current architecture, painting a clear picture of how Workday differs from competing cloud strategies. We'll provide specific details on mission critical functionality like Business Intelligence (Reporting/Analytics), our mobile-first strategy, and our flexible business process framework.*

We will strive to make all sessions interactive and to address the questions of the NWACC membership. For this reason, we are not applying a rigid timeline to the agenda. Please plan to join us afterwards for a casual reception.
